

Photo 5: Looking southwest along the road that provides access to the Fox River Paper Company facility, and along which the transmission line linking the project to the existing electrical substation located approximately 0.25 mile northeast of the project site will be built. The existing 39-foot-tall, 17 kV wood pole subtransmission line is shown in the photo. The conductors shown on the right side of this photo connect into the existing substation.

Photo 6: Looking north toward the existing substation from the unnamed road near the entrance to the Fox River Paper Company. The conductors shown on the left side of this photo connect to the poles shown in Photo 5.
